

4 of 6: FROG

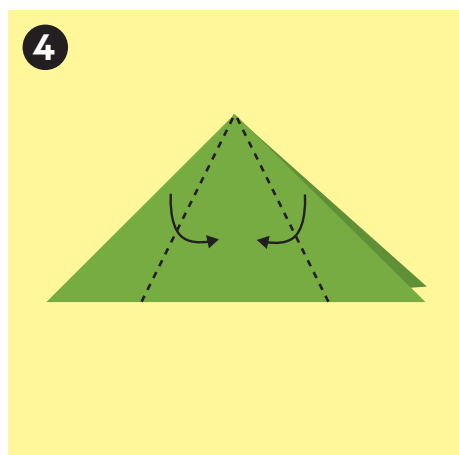

1 Fold your square of paper in half, both ways, and unfold.

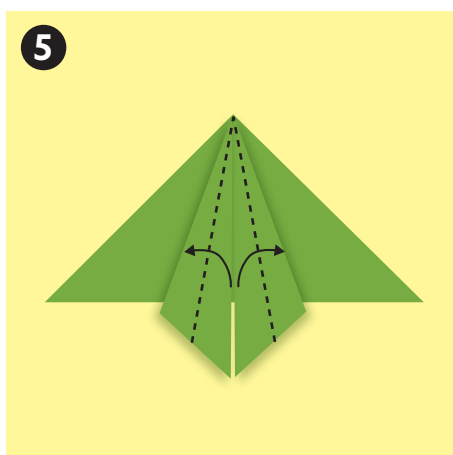

2 Turn the paper over and fold diagonally both ways. Then unfold.

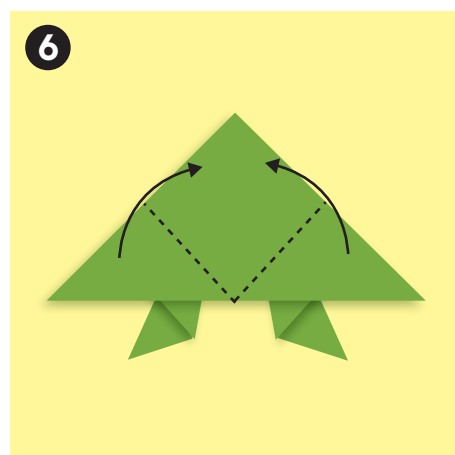

3 Fold the top edge of the paper down while pushing the left and right edges inwards.

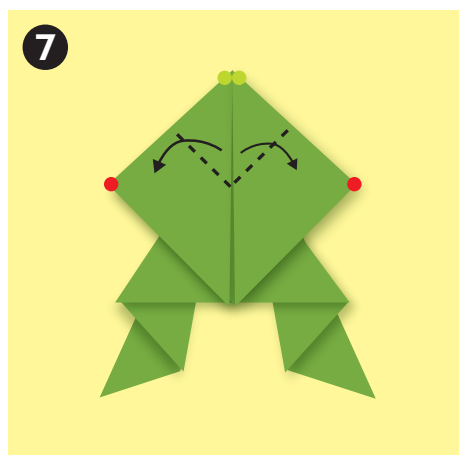

4 With the open sides of the model at the bottom, fold both left and right sides of the top layer in to the centre.

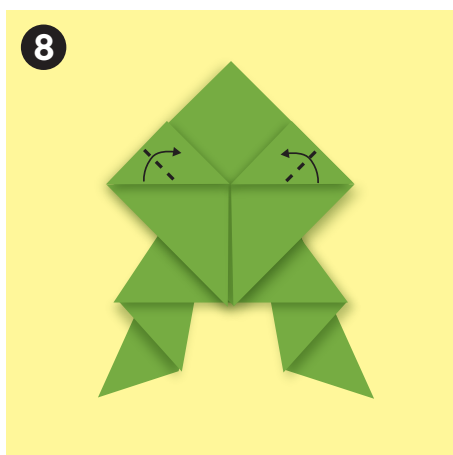

5 Fold the inside layers out from the centre to meet the folded edges.

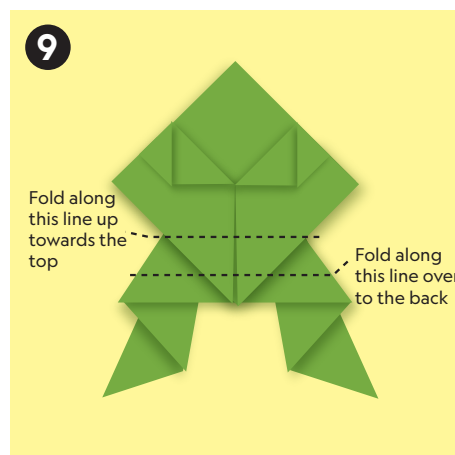

6 Turn the model over, fold the left and right corners of the largest part of the model in to the top corner.

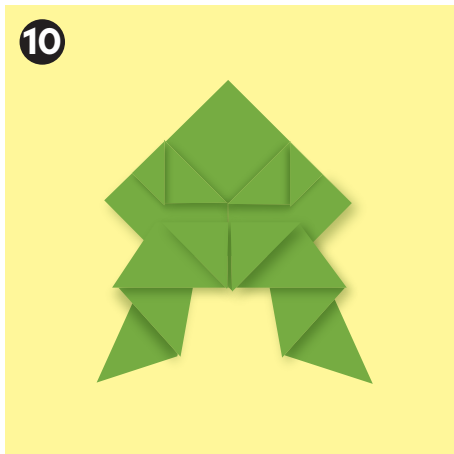

7 Fold the two top flaps outwards so that the green dots sit on top of the red dots.

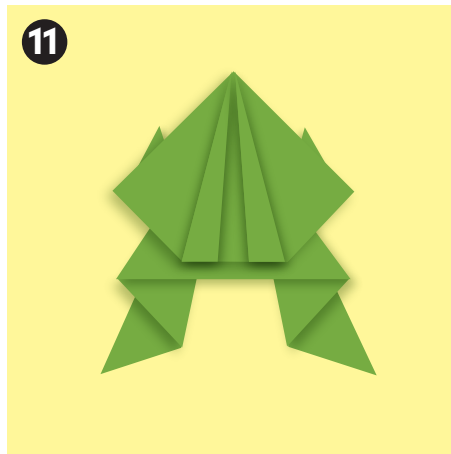

8 Fold the corners in to make the frog's feet.

9 Pleat the body as shown.

The model should look like this.

Turn the model over and it becomes your finished frog! If you run your finger down its back, you should be able to make it jump!
